DETAILED ACTION

Applicant's election with traverse of Group I (claims 1-8, and 19-20) in the reply filed on 10/17/05 is acknowledged. The traversal is on the ground(s) that there is no distinct from Group I (claims 1-8, and 19-20) and Group II (claims 9-18). This is not found persuasive because in the previous Office action, the examiner has been provided the explanation as to why the inventions are distinct, for example, the step of "bonding" as claimed in claim 12 (claim 12 dependently on claims 10 and 9) can be replaced in other steps such as adhesive or soldering instead of using bonding to make the product. Further, the searches for the Group II would be classified in different class than Group I.

The requirement is still deemed proper and is therefore made FINAL. Claims 9-18 are withdrawn from further consideration as being drawn to non-elected subject matter.

Because the Group I (claims 1-8, and 19-22) are distinct, and the examiner would have another Election/Restriction requirement as below:

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, and 19-20, drawn to an apparatus and a device, classified in class 361, subclass 769.
 - II. Claims 21-22, drawn to a system, classified in class 361, subclass 760.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the Invention II has separate utility such as computer system. The subcombination has separate utility such as a semiconductor package and does not require a microprocessor, and a double data rate memory electrically coupled to the microprocessor as claim in the Invention II.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
